Art Unit: 1714

- 1. The amendments of 4/5/07 and 4/17/07 have been entered. Claims 26-51 are pending.
- 2. Claims 26-51 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.
- A. It is unclear what is meant by "eposide" of claim 26. It appears to be a typographical error of "epoxide".
- Claim 46 is rejected under 35 U.S.C. 112, first paragraph, as failing to comply with the written description requirement. The claim(s) contains subject matter which was not described in the specification in such a way as to reasonably convey to one skilled in the relevant art that the inventor(s), at the time the application was filed, had possession of the claimed invention. There is not basis in the originally filed specification for stating that the molecular weight of claim 46 is "number average". The recitation of "number average" is therefore new matter.
- 4. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:
  - (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.
- 5. Claims 26-51 are rejected under 35 U.S.C. 103(a) as being unpatentable over US Pat. No. 6462127 Ingrisch et al..

Application/Control Number: 10/565,328

Art Unit: 1714

Ingrisch discloses the instantly claimed polyurethane dispersions at the abstract; column 1, lines 4-67; column 2, lines 1-67; column 3, lines 1-67, particularly 44-67 which broadly encompasses the instantly claimed invention; column 4, lines 1-67, particularly 18-67, which encompasses the instantly claimed ingredients and amounts thereof. It is noted that the instant claim recites ">12" regarding component A and the disclosure's preferred amount of the instantly claimed component A is 0.3-12%. However, the instant claims recite "comprise", which encompasses the instant components of the patentee. The instantly claimed amounts appear to be based only on the claimed components, not the additional components encompassed by "comprise". The ingredients of column 5, lines 1-8 are additional to those of the instant claims. Taking the amounts of column 5, lines 1-8 of the patentee from the patentee's composition and using the larger amounts of the instantly claimed component A of the patentee gives amounts within those of the instant claims since removing the amounts of column 5, lines 1-8 lowers the amount of the denominator used to calculate the amounts. Furthermore, the amounts overlap due to experimental error in making such measurements and because the broader disclosure of the patentee encompasses larger than the preferred amounts of the instantly claimed component A. Note also column 5, lines 9-67; column 6, lines 1-67, column 7, lines 1-67; column 8, lines 1-67; column 9, lines 1-67; column 10, lines 1-19, which encompasses the instantly claimed high molecular weight; ; column 11, lines 18-67; column 12, lines 1-67; column 13, lines 1-44 which discloses the instantly claimed substrates; and the remainder of the document which encompasses the limitations of the remaining claims, particularly the examples and the claims.

Application/Control Number: 10/565,328

Art Unit: 1714

It would have at least been obvious to one of ordinary skill in the art at the time of the instantly claimed invention to use the ingredients and amounts thereof and the reaction parameters of the instant claims in making the dispersions of the patentee because these are encompassed by the disclosure of the patentee and would have been expected to give the properties of the dispersions of the patentee. It would have at least been obvious to one of ordinary skill in the art at the time of the instantly claimed invention to use the instantly claimed amounts of the instantly claimed component A in the dispersions of the patentee because using one % more than the upper level of the preferred amounts of the patentee that read on the amounts of the instant claims will not give a significantly different result and will give only predictable results to the ordinary skilled artisan, i.e. 12% to 13% is not expected to give much difference and is encompassed by the broad disclosure of the patentee as preferred mode does not teach away from other values and the broad disclosure encompasses broader values of the amount of A! The applicant's arguments have been fully considered but are not persuasive for the reasons stated above and the teachings of the patentee. This rejection is therefore maintained.

6. Applicant's amendment necessitated the new ground(s) of rejection presented in this Office action. Accordingly, **THIS ACTION IS MADE FINAL**. See MPEP § 706.07(a). Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period

Art Unit: 1714

will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the date of this final action.

7. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Patrick D. Niland whose telephone number is 571-272-1121. The examiner can normally be reached on Monday to Thursday from 10 to 5.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Vasu Jagannathan, can be reached on 571-272-1119. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).
